**IDENTIFICAZIONE GIRANTI**

Impellers are key components for engines and power generators that are water cooled.

Neoprene (CR) compounded impellers are the most widely used for standard operating conditions and they deliver the best performance.

Neoprene (CR) impellers are not suitable for highly contaminated water.

Nitrile (NBR) rubber compounded impellers should be used in bilge pumps and engine cooling pumps in highly contaminated fresh or saltwater applications (for example oil, chemicals, etc.)

Nitrile (NBR) impellers may have a reduced flow performance and life span (of up to 20 %) but the benefits of the compound being non-porous makes it suitable for these contaminated water applications.

---

Le giranti sono un componente importante nei motori e generatori raffreddati ad acqua.

Le giranti in Neoprene (CR) sono le più usate nell'utilizzo in pompe di raffreddamento in acqua dolce e salata garantendo il miglior rendimento.

Le giranti in Neoprene (CR) non devono essere utilizzate in acque altamente contaminate.

Le giranti in nitrile (NBR) devono essere utilizzate nelle pompe di sentina e nelle pompe di raffreddamento in acque altamente contaminate ( per es. Olio, prodotti chimici, etc)

Le giranti in Nitrile (NBR) possono avere un rendimento ed una durata inferiore fino al 20%, ma il beneficio della miscela non porosa permette l'utilizzo in acque contaminate.
